

SPECIAL RELEASE

Age and Sex Distribution in the Municipality of Albuera (2020 Census and Population and Housing)

Date of Release: 16 January 2025

Reference No.: 25SR0837-007

The municipality of Albuera, Leyte had a total population of 47,151 persons based on the 2020 Census of Population and Housing (2020 CPH). The household population comprised 100.0 percent of the total population recorded as of the time of census-taking.

Of the 47,151 household population in Albuera, Leyte, 24,148 (51.2%) were males while 23,003 (48.8%) were females. By age group, 15,277 (32.4%) were under 15 years of age (young dependents). On the other hand, persons aged 15 to 64 years (working-age or economically-active population) totaled to 28,719 (60.9%) while those in age groups 65 years and over (old dependents) comprised the remaining 3,155 (6.7%). In 2015, persons aged 0 to 14 years, 15 to 64 years, and 65 years and over accounted for 33.6 percent, 60.4 percent, and 6.0 percent, respectively, of the household population.

Source: Philippine Statistics Authority, 2020 Census of Population and Housing

Moreover, there were more males (46.6%) than females (43.2%) among the 0 to 59 age group. However, among the older age group (60 years and over), females (5.6%) outnumbered the males (4.7%). The same trend was also observed in 2015.

Sex ratio stands at 105 males per 100 females

The sex ratio in Albuera, Leyte was computed at 105 in 2020. This means that there were 105 males for every 100 females. The sex ratio in 2015 was also computed at 105 males per 100 females.

In 2020, children aged below 15 years had a sex ratio of 106 males per 100 females. On the other hand, those aged 15 to 64 years had a sex ratio of 108 males per 100 females. Moreover, among those aged 65 years and over, the sex ratio was 79 males per 100 females. This depicts a longer life expectancy among females than males or a higher mortality rate among males than females in the older age groups.

TECHNICAL NOTES

The Philippine Statistics Authority conducted the 2020 Census of Population and Housing (2020 CPH) in September 2020, with 01 May 2020 as reference date.

The 2020 CPH was the 15th census of population and 7th census of housing that was undertaken in the Philippines since the first census in 1903. It was designed to take inventory of the total population and housing units in the country and collect information about their characteristics.

The Philippine Standard Geographic Codes as of April 2022 was used for the disaggregation of geographic levels of the 2020 CPH.

Age refers to the interval of time between the person's date of birth and his/her last birthday prior to the census reference date. It is expressed in completed years or whole number.

Aging index is calculated as the number of persons 60 years old and over per one hundred persons under the age of 15 years.

Aging of population is a process in which the proportions of adults and elderly increase in a population, while the proportions of children and adolescents decrease. This process results in a rise in the median age of the population. Aging occurs when fertility rates decline while life expectancy remains constant or improves at the older ages.

Household is a social unit consisting of person or a group of persons who sleep in the same housing unit and have a common arrangement in the preparation and consumption of food.

Household population refers to all persons who are members of the household.

Median age is the age that divides the population into two numerically equal groups; that is, half of the population are younger than this age and the other half are older.

Overall dependency ratio is the number of persons under 15 years old (young dependents) and persons aged 65 and older (old dependents) per one hundred persons 15 to 64 years old (working-age or economically-productive group) in a population.

Population pyramid is a bar chart, arranged vertically, that shows the distribution of a population by age and sex. By convention, the younger ages are at the bottom, with males on the left and females on the right.

Sex is the biological and physiological reality of being a male or female.

Sex ratio is the number of males per one hundred females in a population.
